

OptiCall Paging Systems

Opti-call.com

What is an OptiCall Pager System?

Improve handover times dramatically in your opticians

The pager system is a simple piece of equipment that enables optometrists to alert the dispensing team when a customer has had their sight test and requires further assistance. In its most basic form the paging system will have a pager button in the test room the optometrist used to active a pager which is carried by an optical assistant.

OptiCall lets the optical assistant know which test room is paging and what the customer is likely to purchase, this is the preferred method currently throughout the UK

How it works

1. Press a button on the OptiCall when assistance is needed.
2. A preprogrammed, customized message is sent to LRS alpha staff pager
3. Staff receives page and responds immediately to the handover request

Benefits

- Enhance customer service by providing immediate customer assistance
- Eliminate noisy and often missed overhead paging
- Improve staff productivity
- Easy to install and use
- Increase customer satisfaction
- ROI
